Work Experience

Full Stack Software Engineer

Priority1 POS / Buford, GA

Jul 2018 - Current

- Maintains and collaborates on several web applications for internal and client use
- Designed and developed 10+ applications using React and Typescript
- Collaborated on and developed 4 desktop applications using Electron
- Deployed various projects to AWS servers with full CI/CD pipeline
- Assisted with multiple internal optimizations by automating various tasks using Python or TS Node

Projects

Task'd – PWA designed to manage all personal/professional timers, events, and tasks

- Implemented multiple features for task, event, and Toggl tracker management
- Manages API and facilitates database transactions via Supabase/PostgreSQL
- Interacts with multiple third-party APIs (Toggl & Google Calendar)
- **Tech Stack:** React/Next, Typescript

PriorityRewards – Suite of applications for connecting FPOS clients to potential customers

- Built 3 React/Next applications for client and admin functions
- Built 1 Electron application for syncing local FuturePOS data with PriorityRewards servers
- Facilitated communication between applications to create a cohesive product
- **Tech Stack:** React/Next, Typescript, Fastify, Astro, Electron, MongoDB
